Ontology-based Approach for Mapping Concepts and Requirements from Regulations and Standards: The Case of the EU AI Act and International Standards

ADAPT Centre, Trinity College Dublin

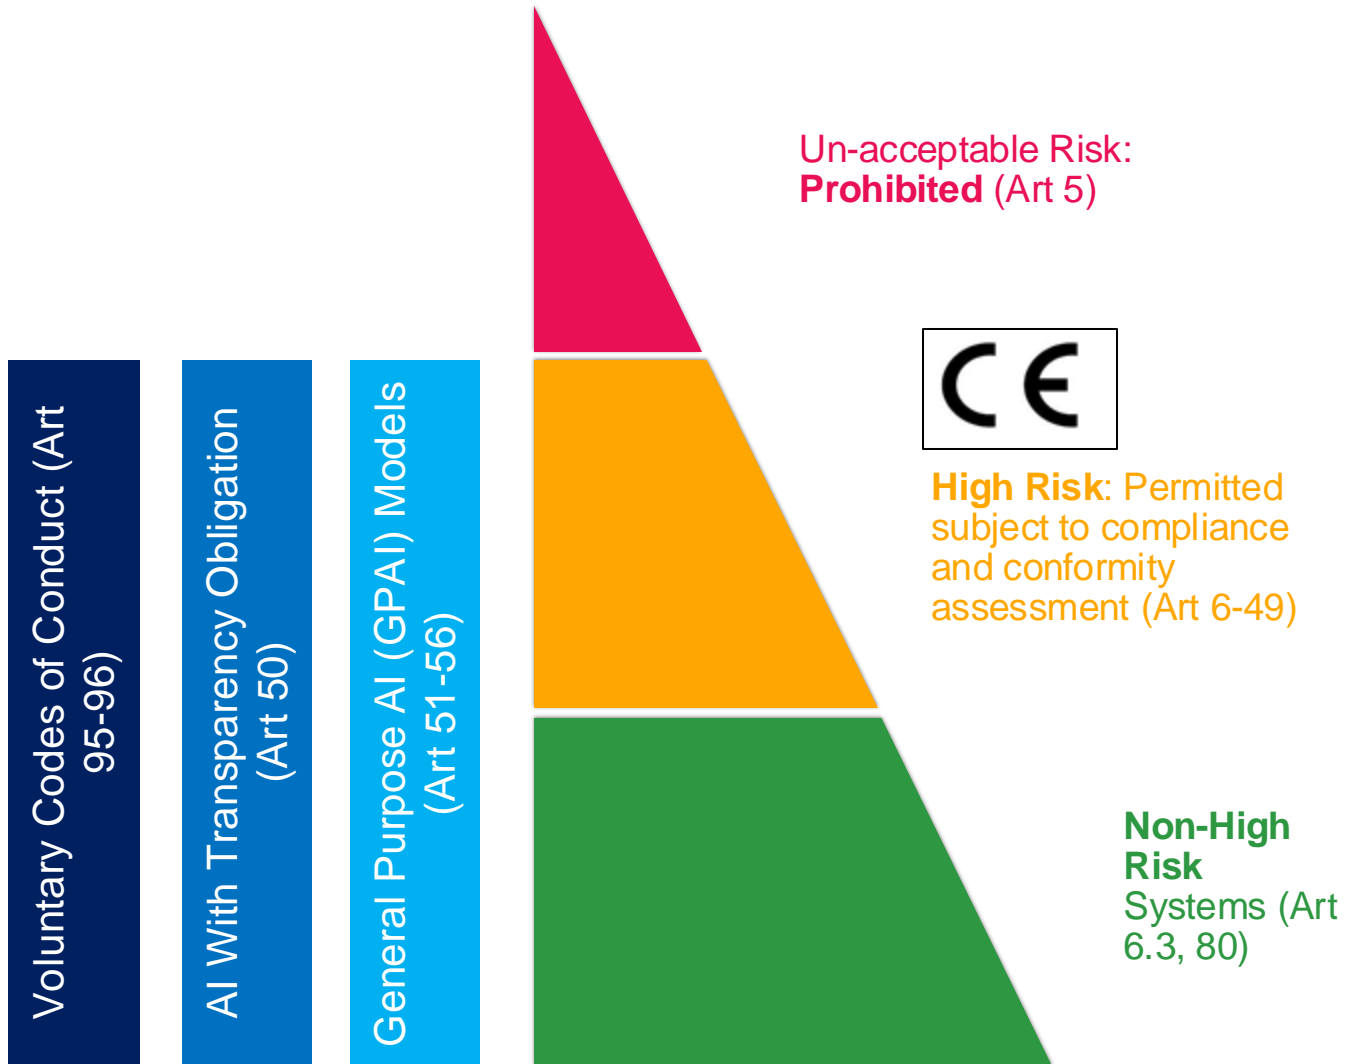

Julio Hernandez – julio.hernandez@adaptcentre.ie

Delaram Golpayegani - delaram.golpayegani@adaptcentre.ie

Dave Lewis - dave.lewis@adaptcentre.ie

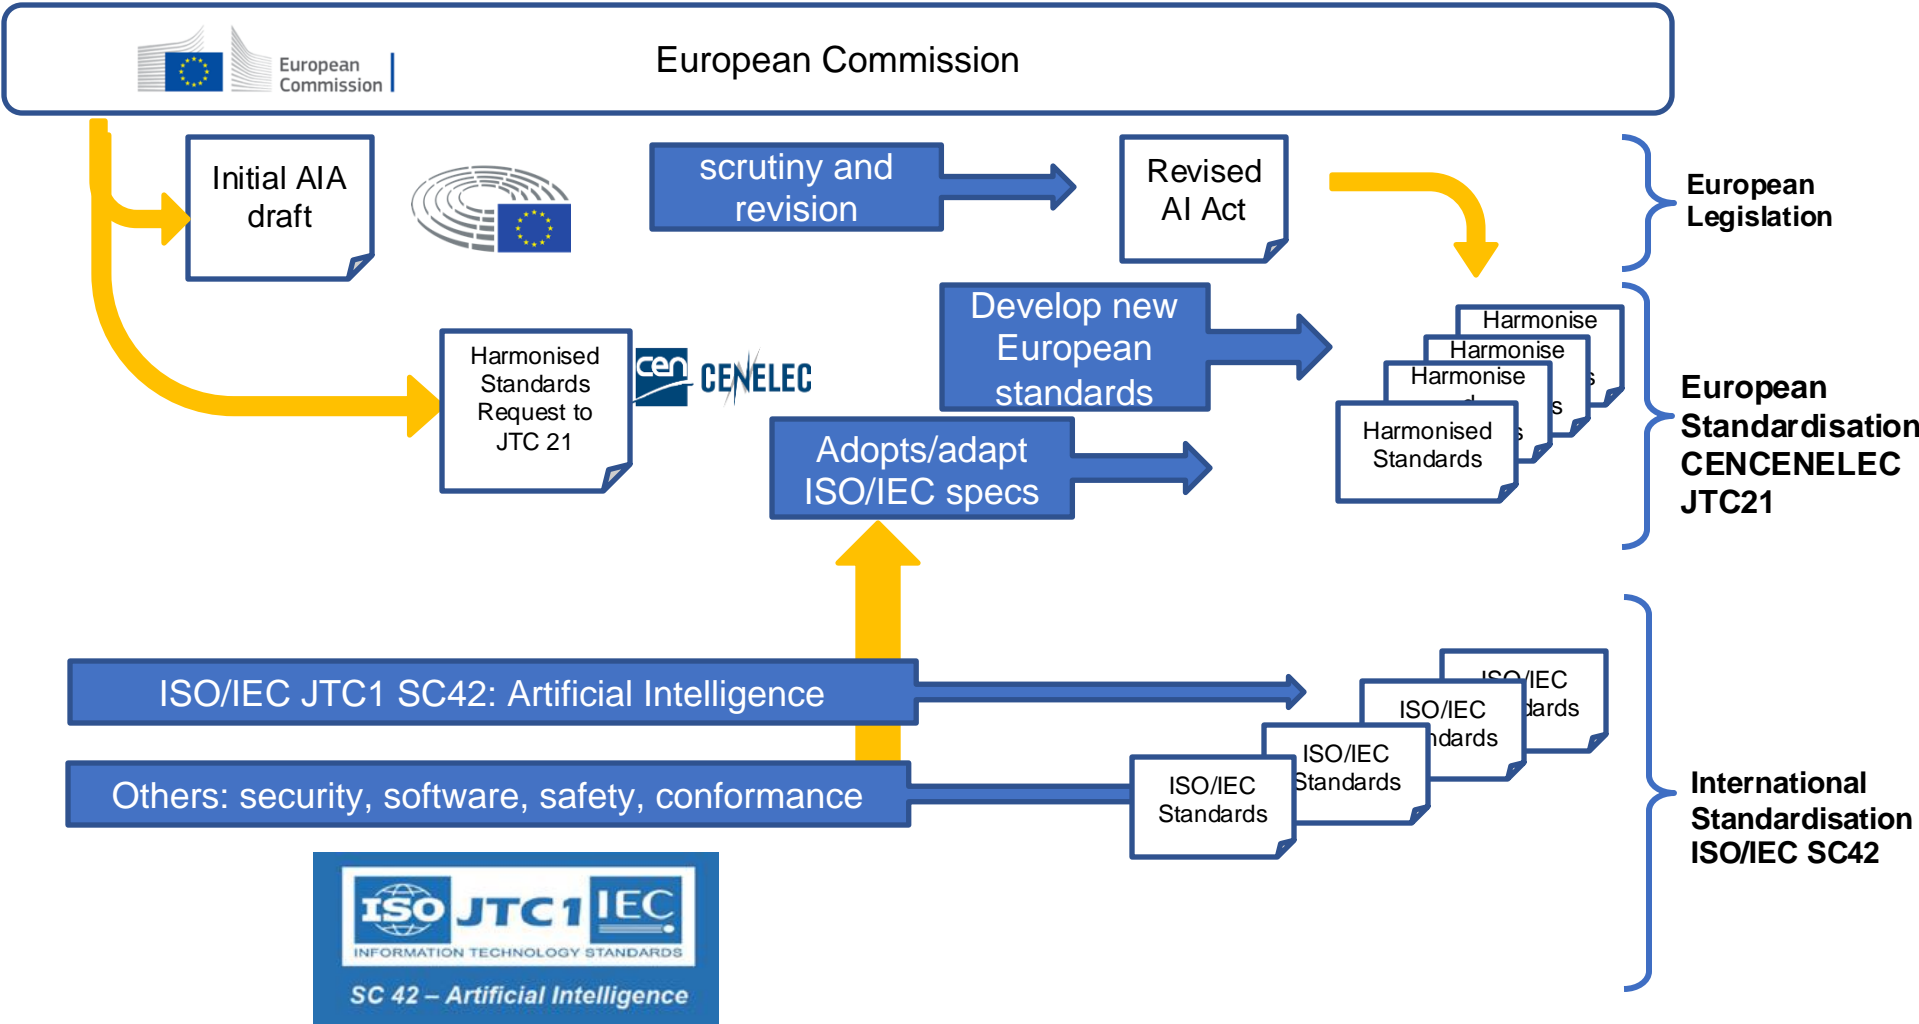

EU AI Act

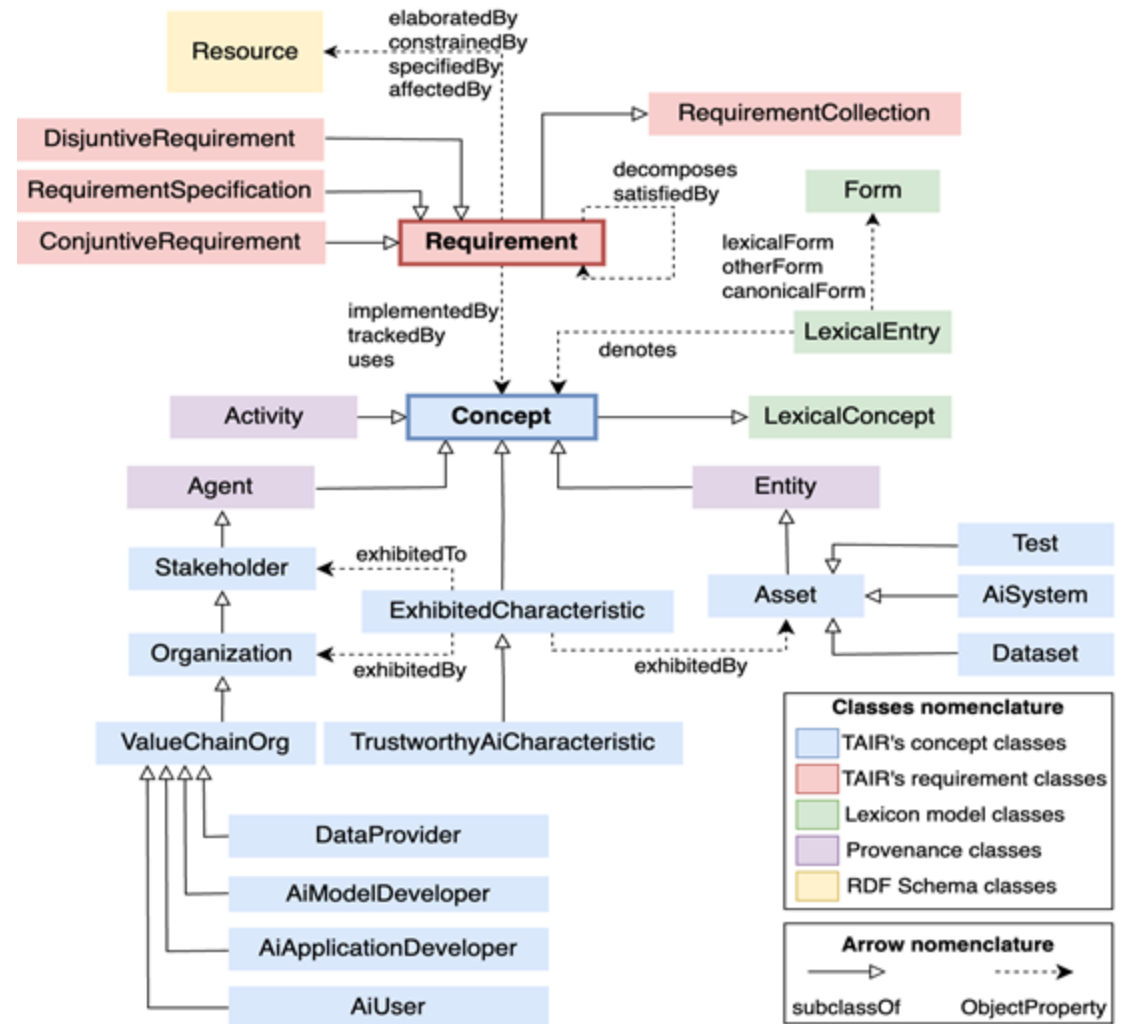

- Aims to protect **health, safety and fundamental rights**
- Enable access to **EU single market** for AI products/services
- Part of New Legislative Framework for product health and safety harmonization across EU single market
- A **Risk-based** approach to regulating AI
- Requires **product certification & surveillance** for high-risk AI system – Horizontal rules enforced Vertically/Sectorially
- Separate direct regulation of **General Purpose AI Systems**

Harmonised Standards and the AI Act

Trustworthy AI Requirements Ontology

- The TAIR ontology is a semantic approach to map concepts and requirements from regulations and standards
- Treat as an open Findable, Accessible, Interoperable, Reusable (FAIR) using Linked Open Data principles
- Proof of concept modelling of AI provider obligations of initial draft of the AI Act
- Mapped to concepts and requirements from
 - ISO/IEC 22989: AI Terms and Concepts
 - ISO/IEC 42001 AI Management System
- Site: <https://tair.adaptcentre.ie>

Extracting Semantics of Terms, Concepts and Requirements

Extract defined terms from Act as SKOS Concept Scheme (Art 3)

Separate atomic requirement statements from Act Provisions (Art 10.1 to 10.6) and add Requirement concept for each to a requirement collection

Extract and link concepts deemed relevant to satisfying each requirement into further SKOS concept scheme

Article3-29	training data
Article3-30	validation data
Article3-31	validation data set
Article3-32	testing data
Article3-33	input data
Article3-34	biometric data
Article3-35	biometric identification
Article3-37	special categories of personal data
Article3-38	sensitive operational data
Article3-50	personal data
Article3-51	non-personal; data

10.2. Training, validation and testing data sets shall be subject to data governance and management practices appropriate for the intended purpose of the high-risk AI system. Those practices shall concern in particular:

- (a) the relevant design choices;
- (b) data collection processes and the origin of data, and in the case of personal data, the original purpose of the data collection;
-
- (h)....

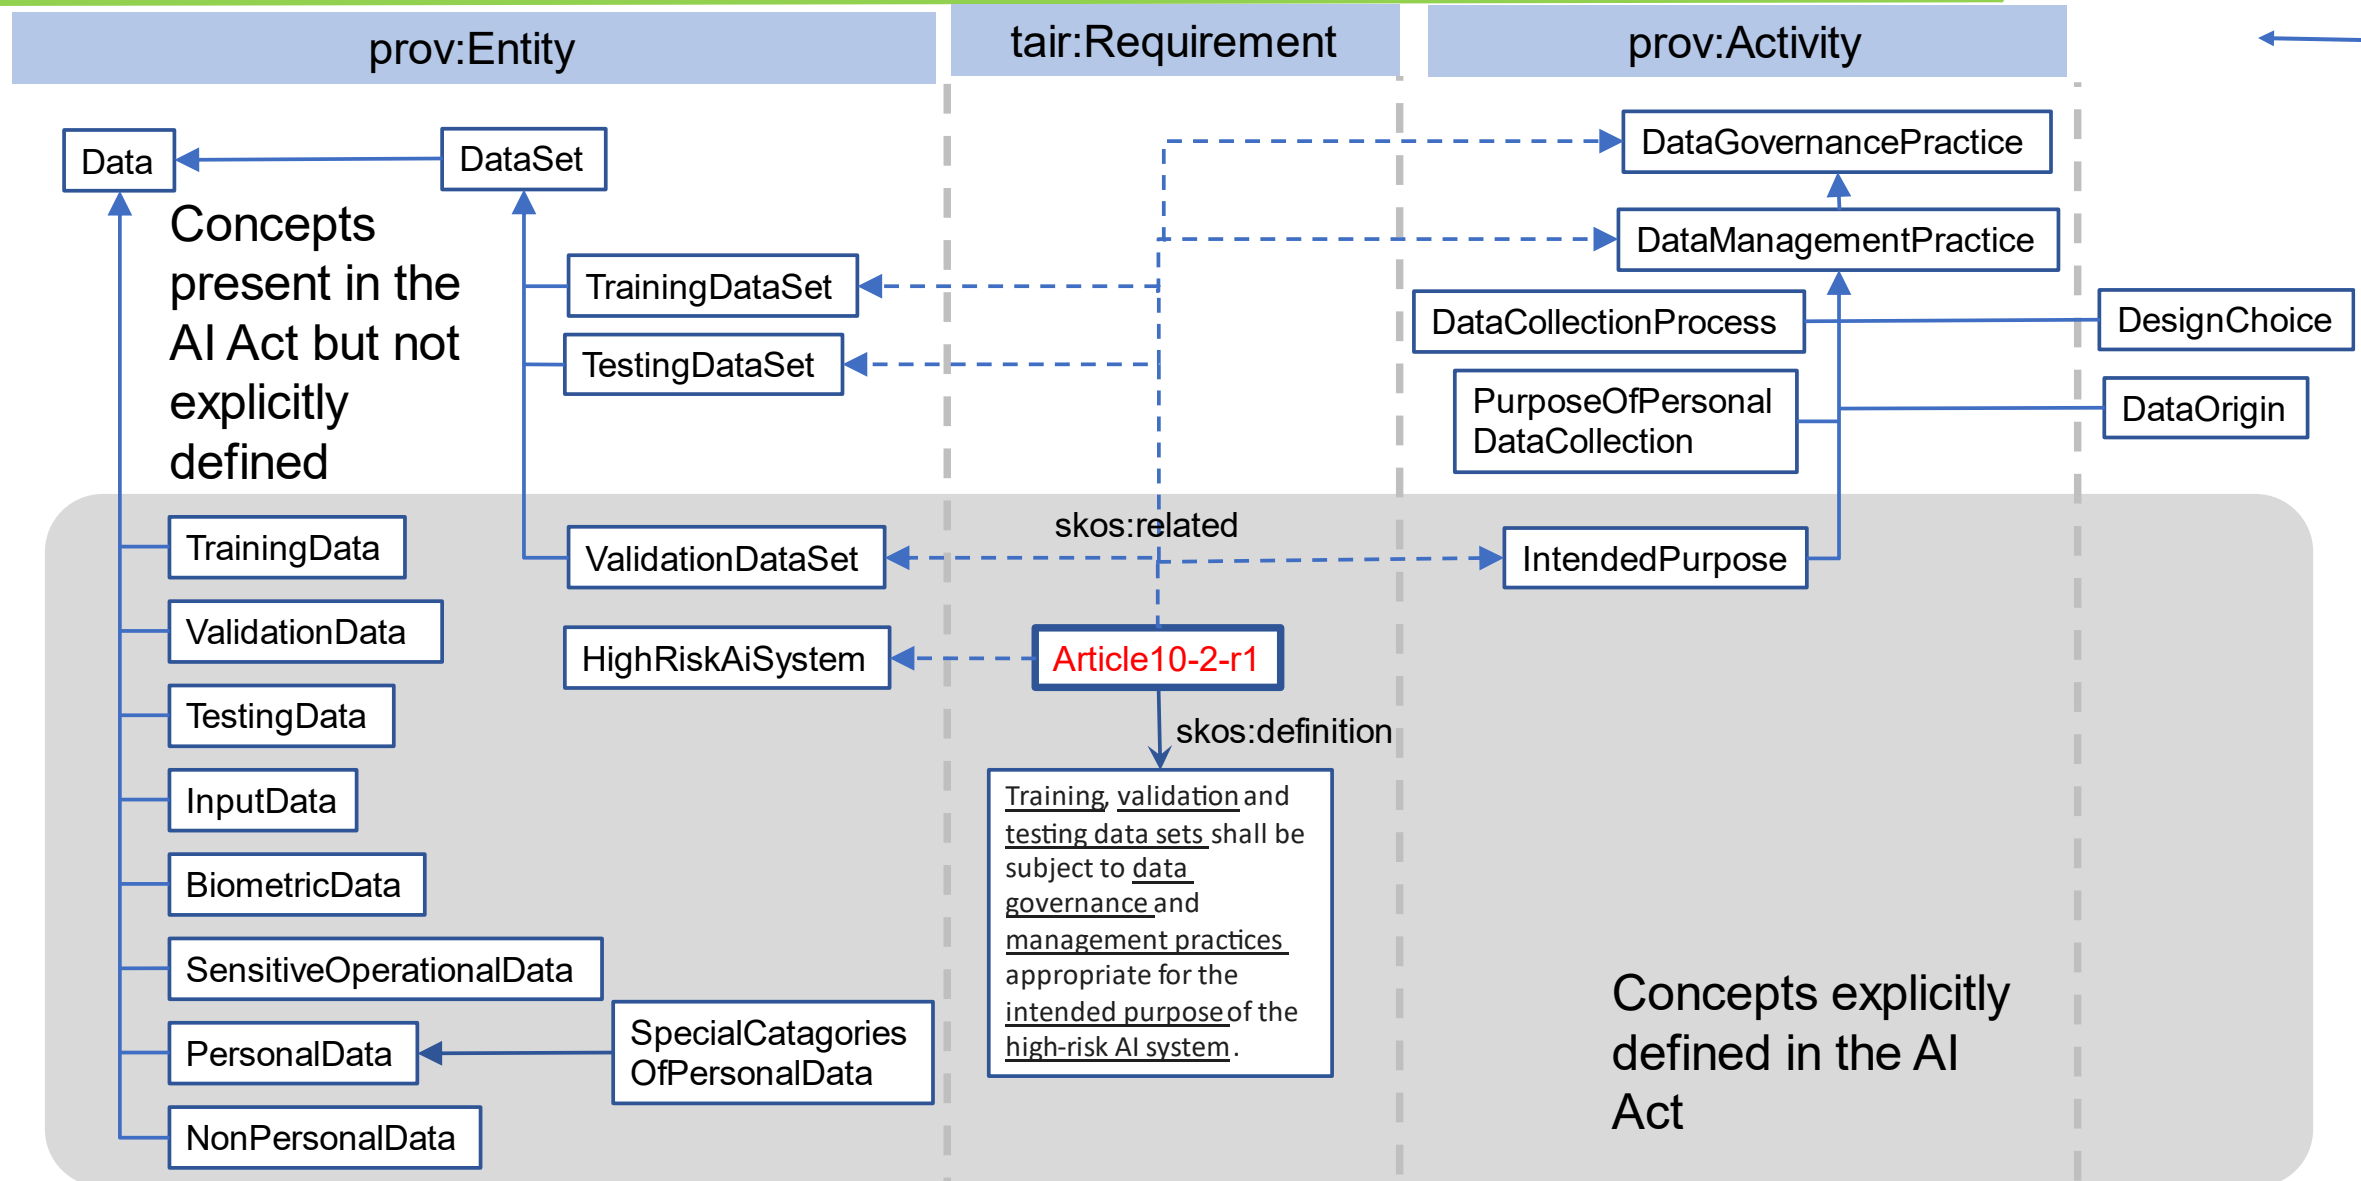

Article10-2-r1	Training, validation and testing data sets shall be subject to <u>data governance and management practices</u> appropriate for the intended purpose of the <u>high-risk AI system</u> .
Article10-2-a-r1	[<u>Data governance and management practices</u> shall concern in particular] the relevant <u>design choices</u>
Article10-2-b-r1	[<u>Data governance and management practices</u> shall concern in particular] <u>data collection processes</u> and the <u>origin of data</u> , and in the case of <u>personal data</u> , the <u>original purpose of the data collection</u>

AI Act Art 10 Requirement Example

AI Act – Standards Mapping Browser

Title name: Title III - High-Risk AI Systems

Chapter: Chapter 3

Article: Article 18

Article name: Obligation to draw up technical documentation

Requirement: Article 18.1_R1

Related Concept(s): High Risk Ai Sys...

Related AI MSS requirement: Documented info...

Requirement definition:
Providers of high-risk AI systems shall draw up the technical documentation referred to in Article 11 in accordance with Annex IV.

Concept definition:
Lexical entry - High Risk Ai System

Requirement definition:
AI management system (AIMS) requirement collection - 7.5.1 - Documented information general

Constrained by:

- Article 11

AI concept: CE marking

AI lexical entry: Select select_lexi...

Definition:
a marking by which a provider indicates that an AI system is in conformity with the requirements set out in Title III, Chapter 2 of this Regulation and other applicable Union legislation harmonising the conditions for the marketing of products ('Union harmonisation legislation') providing for its affixing;

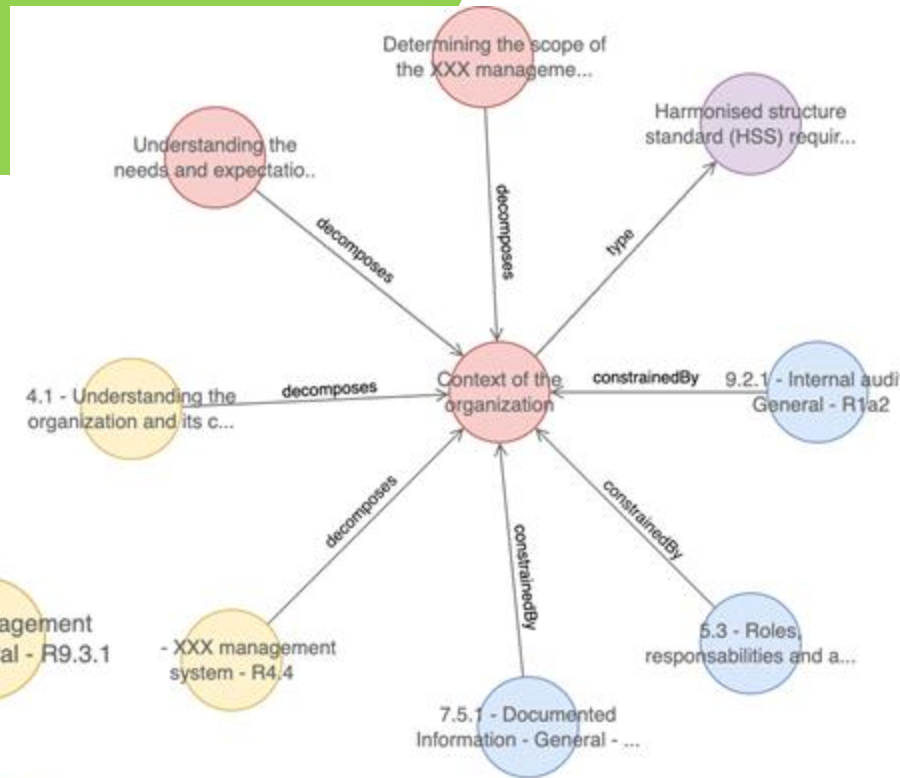

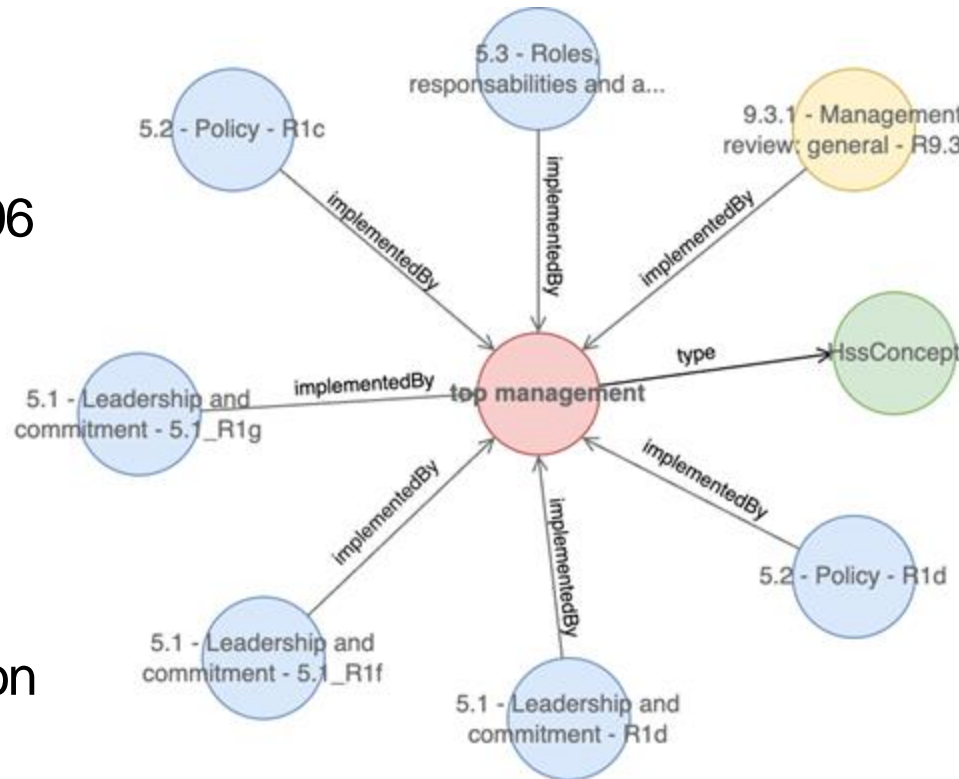

Requirements related:
Obligations of providers of high-risk Ai systems - Article 16.1_R1i
Conformity assessment - Article 19.1_R2

Demo site: <https://tair.adaptcentre.ie/demo.html>

Open Knowledge Graph

- From 15 Articles in initial draft of AI Act related to AI provider obligations
 - extracted 118 atomic requirements,
 - 46 defined term and 23 undefined terms
- ISO/IES 22989 yielded ; 106 defined concepts
- ISO/IEC 42001: 25 defined concepts
- Only 6 coinciding concepts: AI System; Risk; Training Data, ; Validation Data; Testing Data, Documentation

AI Act: Harmonised Standards Request to ESO

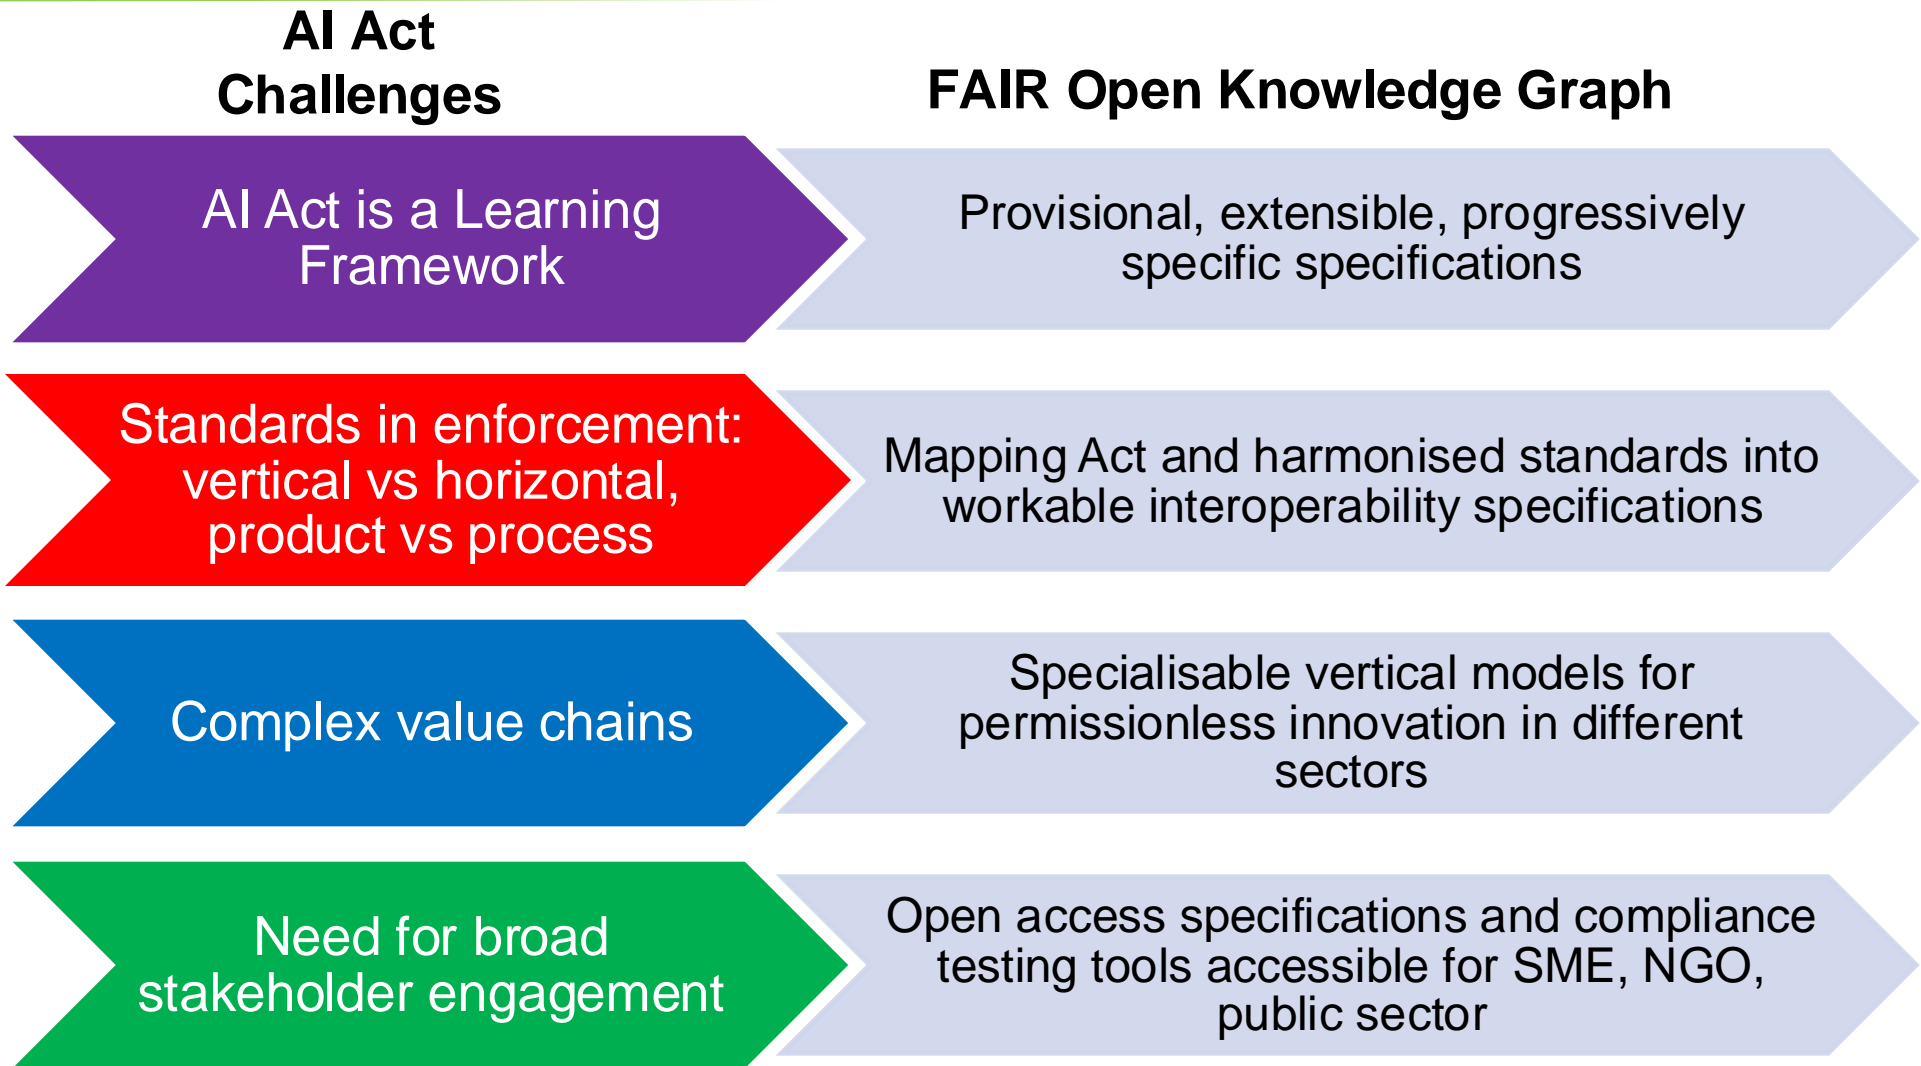

Requirement for European Standard https://ec.europa.eu/growth/tools-databases/enorm/mandate/593_en	Possible SC42 standards
Risk Management Systems for AI systems	ISO/IEC 23894 - Ai Risk Management
Governance and quality of datasets used to build AI systems	ISO/IEC 5259.1-5 - Data quality for analytics and machine learning
Record keeping through logging capabilities by AI systems	ISO/IEC 24970 — AI system logging
Transparency and information provisions for users of AI systems	ISO/IEC DIS 12792 - Transparency taxonomy of AI systems
Human oversight of AI systems	ISO/IEC AWI 42105 - Guidance for human oversight of AI systems
Accuracy specifications for AI systems	ISO/IEC AWI TS 25223 - Guidance and requirements for uncertainty quantification in AI systems & ISO/IEC AWI 23282 - Evaluation methods for accurate NLP systems
Robustness specifications for AI systems	ISO/IEC TR 24029.1-2 Assessment of the robustness of neural networks
Cybersecurity specifications for AI systems	ISO 27090, ETSI?
Quality management systems for providers of AI systems, including post-market monitoring processes	ISO/IEC 42001 AI management system & ISO/IEC 27001:2013 Information security management systems
Conformity assessment for AI systems	ISO/IEC DIS 42006 - Requirements for bodies providing audit and certification of AI management systems

- EC Request for Harmonized Standards from European Standards Organisations (ESO)
- Compliance by Providers conveys presumption of conformity
- Providers would remain responsible for satisfying Act requirements and harmonized standard remain under review
- If ESO unsuccessful, EC can define Common Specifications
- ESO may adopt existing international standards for AI processes or develop new ones – JRC reports:

<https://publications.jrc.ec.europa.eu/repository/handle/JRC132833>

<https://publications.jrc.ec.europa.eu/repository/handle/JRC139430>
