CEITEC:

Wastewater in laboratories

Specification of water purity levels in relation to normal laboratory work (demineralized water, tap water, autoclaved water, purified water, etc.). Definition of good laboratory practice in relation to water use (e.g., running laboratory glassware washers only when full; avoiding rinsing under running water, etc.). Furthermore, good laboratory practice with relevant references to occupational safety and legislation in terms of what can and cannot/must not be poured down the sink. The aim is to create, for example, an e-learning course that could be accessed via the IS by everyone (students/employees) who works in the laboratory.
