

Faculty/institute topic in the field of "Water and Biodiversity"

Faculty of Science:

Create a gene pool collection of aquatic and wetland plants in the Botanical Garden of the Faculty of Science, Masaryk University

The aim of the project is to create a gene pool collection of aquatic and wetland plants in the botanical garden. This collection should familiarize pupils, students, and the public with wetland species and the importance of wetland communities (water retention in the landscape, mitigation of extremes in the landscape, self-cleaning ability of water, etc.).
