

Faculty/institute topic in the field of "Water and Biodiversity"

Faculty of Arts:

Water savings in buildings of the Faculty of Arts, Masaryk University, through leak detection and water-saving devices

The aim of the project is to map water consumption in the buildings of the Faculty of Arts, Masaryk University, identify risk areas for leaks, design and test the installation of water leak detectors (damage prevention) and recommend suitable water-saving aerators for sinks, kitchens, and other areas. The project will provide the faculty with an overview of the current state of the infrastructure and offer realistic and effective measures that can reduce drinking water consumption and save money on potential damage compensation.
